Editor

Geoff Lambert

Editorial Team

Victor Isaacs, Duncan MacAuslan.

Contacting the Editor

The Times welcomes articles and mail and will be pleased to receive yours. Please send articles and letters to

Geoff Lambert, 179 Sydney Rd FAIRLIGHT NSW 2094

Email: G.Lambert@unsw.edu.au

Phone 61 2 9949 3521; Fax 61 2 9948 7862

How to submit copy

Submit paper manuscripts or word-processor files (MS Word preferred) on disk or via e-mail. Illustrations should be submitted as clean sharp photocopies on white paper or scanned GIF or TIF format images with at least 300dpi resolution on disk or via e-mail.

Editorial deadlines

Contributions should reach the editor by the first day of the month preceding the month of publication.

Subscriptions

Membership of AATTC is \$45 and includes subscriptions to both *The Times* and *Table Talk*. Individual copies of both journals are available at \$2.95 per copy from the Railfan Shop in Melbourne and the ARHS bookshop in Sydney.

Reproduction

Material appearing in *The Times* or *Table Talk* may be reproduced in other publications, provided acknowledgment is made of the author and includes the words "The Times, journal of the Australian Association of Time Table Collectors". A copy of the publication which includes the reference should be sent to the editor.

Disclaimer

Opinions expressed in *The Times* are not necessarily those of the Association or its members. We welcome a broad range of views on timetabling matters.

When a leading zero is significant

DUNCAN MACAUSLAN *remembers the days when a myriad of industrial bus services trundled around the industrial estates to the south of Sydney's CBD*

The recent change to Sydney's eastern bus routes under the title *Better Buses East* saw the disappearance of the last routes in the area using the 'industrial' route numbers with leading zeros – 040 and 048.

Sydney was one of the few places in the world, perhaps the only one, where a leading zero was significant in a bus route number – that is a route 005 was different to route 5¹. The former was an industrial service once run from Rockdale Station to Waverley Depot, while the latter was used for a 'sports' service from Ashfield Station to Canterbury Racecourse and also from Kent Street Parking Centre to the old Showgrounds.

A complete history of Sydney's industrial services would be close to impossible as some were operated as charters, whilst others had a very short life. Many industrial services had route numbers in the normal series such as 367 from Sydenham Station to Bondi Junction, whilst others were remnants of old routes such as 013, originally 319 the Cleveland Street service.

For many years a separate *Guide to Industrial Services* was published for the south-eastern suburbs of Waterloo, Alexandria, Botany, Mascot and Pagewood where many of Sydney's large companies had factories. This area, north of Botany Bay and surrounding the Alexandria Canal, had been swampland and over the years between the wars was drained and turned into industrial estates, booming in the post World War 2 period.

The trams in the area had provided a limited industrial service, concentrating on Randwick Work-

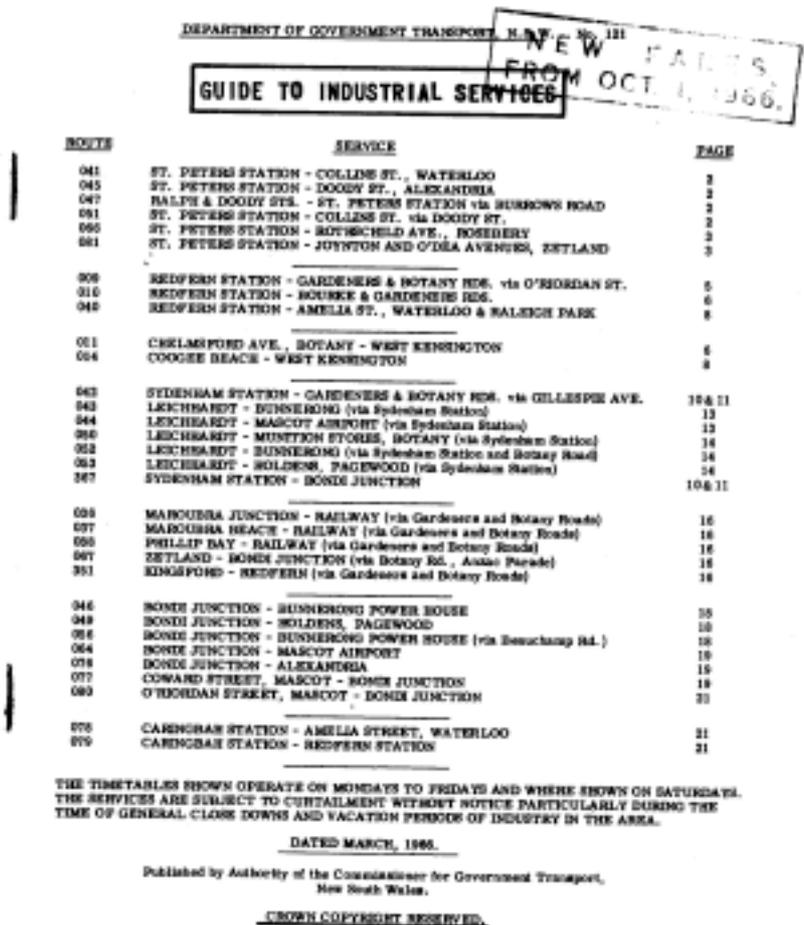

shops and the WD and HO Wills tobacco factory at Kensington (opened 1913). Some trams on the Daceyville line were extended to Maroubra² but overall the inflexibility of trams limited their ability to serve new factories away from existing tracks.

The earliest Guide in my collection was published by the Department of Government Transport in March 1966 (*below*). Earlier editions probably exist as the 0xx series of numbers came into use from June 1957 with the demise of the tram routes in the area. The 24 page book is an untidy hotch-

[2] Keenan D R, *The South Eastern Lines*, p66.

potch of timetables, routes, maps and fare-tables. As can be seen on the cover it is a typed document with routes broadly grouped by their origin points such as St Peters Station, Redfern Station, and Leichhardt etc.

Page 2 (*our page 4*) shows the timetables for routes 041, 045, 047 and 051 in departure sequence but not giving run or arrival times – not much help if you had to clock on (other routes do have run times). Page 4 has a map (*also on our page 4*) of these and other routes. Note the many factories in the area served varying from soft drink manufacturers, through light industries such as Columbia Pen-

[1] Brisbane's trams also used leading zeros but not blank.

timetable 21 (our page 5, top right). Otherwise the contents remained the same typewritten mix.

The next issue, renamed *Industrial Bus Services – Timetables*, was on 3 November 1985, printed in green and for the first time typeset. The maps however were the same style as originally and the layout whilst considerably improved was still unfriendly. Of note in this timetable is the 013, mentioned earlier, with only one journey from Coogee to City Road (our page 5, lower left).

From the worst to one of the best, the new standard sized *South Eastern Industrial Area* timetable of 2 November 1986, with the cover in blue ink, timetables in black, with UBD maps overlaid with blue, red and green coloured routes. This issue was for a complete reorganisation and simplification of the area's industrial routes. Apart from the new 043 (Sydenham Station to Airport), promoted by a separate handbill, the 06:08 run of route 040 was the only weekend industrial service

(Continued on page 6)

cils to heavy industries, and probably polluting ones, such as Austral Bronze and Australian Iron and Steel.

Most routes operated Mondays to Fridays only but routes 042 and 052 (page 11, our page 5, top left) provided an early morning service from Leichhardt and Sydenham Station to Botany Road. In this case a full timetable was made available.

Similar books were published by the DGT in, at least, January 1969, January 1971 and July 1972; the Public Transport Commission in April 1974, April 1976 and August 1979. During this period there were many route and time changes as the industries changed, working hours shortened, and shift times altered.

The first change of format appeared with the Urban Transit Authority's second issue, undated, where blue ink was used and the timetable numbered E221, i.e. issue 2 of Eastern

duced on 5 August 1990 from Bondi Junction to Alexandria.

Other industrial services were operated elsewhere in Sydney such

as services to Chullora (029 – 035), 061 in Strathfield, and 090 to Pyrmont.

scheduled (our page 5, lower right). The 043 operated four journeys on Saturdays, Sundays and holidays and these only lasted until 26 April 1987.

The next issue of the booklet was the last, dated 18 October 1987, it had few changes, other than being in blue ink throughout (its cover above, map on our cover, contents page right). Route 080 from Mascot to Bondi Junction was one of the routes that were deleted at this time.

The next set of eastern suburbs changes, 5 August 1990, saw the few remaining south eastern industrial services distributed amongst normal timetables. Routes 040 (Redfern Station to Zetland) and 079 (Dolls Point to Redfern Station – 1 am journey) placed in the 301 timetable; 041 (Railway Square to Airport via Redfern), 046 (Railway Square to East Botany) and 047 (Redfern to Pagewood) were with the Botany Road timetables (309, 310).

Route 079 was last run on 15 February 1992, 041 was replaced by the current 305 from 12 Jun 1993, 046 and 047 were deleted from 02 February 1999.

Route 048 was a new service intro-

Goods Train runs as routine between Murrabit and Stony Crossing. Passengers may travel under the usual conditions. On occasions the Goods Train may depart Murrabit earlier than 2 a.m. For particulars inquire from Stationmasters Kerang or Murrabit.

The passenger service beyond Murrabit had gone by the 7th November 1932 timetable. (above) A large number of VR branch line passenger services were withdrawn during 1930 and 1931 and Murrabit to Stony Crossing was one of this batch of withdrawals. The table above shows the details of numbers of outward passenger journeys as found in the VR Annual Reports.

The passenger service to Murrabit was still 3 trains per week and the Wednesday and Friday trains continued to provide both a shoppers' service to Kerang (albeit with less shopping time) and connections to and from Melbourne. The symbol G means goods train with car attached. The footnote about travelling to Stony Crossing on goods trains was standard in public timetables of the period. The comment "On occasions the Goods Train may depart Murrabit earlier than 2 a.m." indicates that the Saturday Down and Monday Up were the Stony Crossing train which may already have been

conditional beyond Murrabit by this time.

By the timetable of 28th September 1936 (middle, below) all trains were running earlier but although connections at Kerang on the Down were marginally better, those on the Up were significantly worse.

The service shown in Country Train Service circular W.T.T. 100/40 commencing 21st May 1940 (columns 2 and 3, below) consists of a weekly shopper's train from Murrabit into Kerang on Wednesday - more time for one's purchases but a poor connection to Melbourne. The heading of the Down train column is misleading as it and Note A don't refer to the branch line. The footnotes refer to the goods trains and light engines.

The timetables from 1932 onwards make much more sense when one reads the Northern and Midland District working timetable of 28th October 1940 (page 9, lower right). The train numbers have been altered from those of earlier in the year and the car goods is back to running twice weekly. The light engines tell us that crews were not based at Murrabit and the passenger car (or caravan) travelled just 60 miles each week. The Stony Crossing train was conditional beyond

Murrabit - the double dagger (‡) symbol is the VR's notation for a train that runs only if required. After completion of the extension of the Yarrowonga line into New South Wales to Oaklands, the Fordson rail tractor (1 RT) used during the construction period was transferred to Kerang to operate services to Stony Crossing and was the motive power for Nos. 61 and 98. The operating instructions for the rail tractor make interesting reading (loads and operating instructions on our page 10 and 11).

The residual passenger service to Murrabit had been withdrawn by the country timetable of 15th De-

ember 1941, (above, right) no doubt due to the exigencies of wartime traffic and falling patronage.

Given the loads quoted for the rail tractor and the nature of the service provided, it is readily ap-

parent that traffic to Stony Crossing was very sparse - so sparse that the service was suspended beyond Murrabit during 1943. As no source I've seen has a more precise date, it may well be that traffic had fallen off to such an extent that the last train to Stony Crossing may have run some considerable time before anyone realised that it was, in fact, the last train.

Murrabit was still served by two goods trains each week (our page 12, upper) in the 6th October 1947 working timetable and the table maintained the fiction that Stony Crossing still existed. However, the Murrabit stationmaster had been replaced by a caretaker by this time.

The restricted service listed as commencing on 19th November 1951 indicates that No. 1 Goods departed Kerang at 5.30 a.m. Monday only and returned from Murrabit as No. 2 at 7.30 a.m. The normal service at this time was intended to be Monday and Wednesday running to these times, as well as a Friday conditional.

The Murrabit to Stony Crossing section was officially unused from 4th November 1952, some nine years after suspension of the service, and this change of status probably brought about the inclusion of the note beside stations Ballbank and beyond that appeared in later working timetables. Westby was closed to all traffic on 18th January 1954.

By the late 1950s, one goods train per week was the norm as is shown in the WTT of 9th November 1959 (our page 12, lower).

The end came swiftly and unexpectedly. When the last train to Murrabit departed Kerang, no-one knew that it was to be the last train (shades of Shelbourne and Gembrook!). A bridge near the site of Westby partially collapsed as the returning weekly train was crossing

NOTES.

	At Mileage.	Speed Necessary. (Miles per hour.)
Down journey--	186 approaching Westby	20
Up journey--	186½ approaching Westby	20

The Fordson Tractor is authorized to haul approximately 100 tons at an average rate of speed of 12 miles per hour. If the load be increased, speed will be proportionately reduced.

The following instructions must be observed in connexion with the working of the Fordson Tractor:—

Fordson Tractor Service—

- (1) A train run by a Fordson Tractor will be worked by two men, i.e., a Driver and a Guard, and may run only on a Line that is jointly agreed to by the Chief Mechanical Engineer and the General Superintendent of Transportation.
- (2) Only an employee certified for the purpose by the General Superintendent and Chief Mechanical Engineer must be allowed to drive a Tractor on any part of the Running Lines or on any Siding. He is to operate the Tractor personally, and under no circumstances allow any unauthorized person to operate it.
- (3) Only authorized persons are allowed to ride in or on the Tractor. Except in the case of necessity no official must engage in conversation with the Driver whilst the Tractor is in running.

[continued next page.]

FORDSON TRACTOR SERVICE—*continued.*

- (4) If the Driver when on duty is required to leave the Tractor he must see that the fuel supply is cut off and that the Hand Brake is hard "On."
- (5) The Tractor when hauling a train must always run engine first in the direction in which the greater amount of loading is offering.
- (6) Unless specially authorized by the General Superintendent of Transportation, a train hauled by the Fordson Tractor must have a Brake Van in the rear and the Guard must ride in the Van.
- (7) The train will be controlled by Hand Brakes only, and the Guard must, when approaching a station or any other point at which the train is to stop, or when descending grades, be prepared to assist the Driver by use of the Van Hand Brake.
- (8) Should the Tractor be required to operate during darkness proper Head Signals must be carried.
- (9) A Train operated by the Fordson Tractor must not be admitted to an occupied road in accordance with Regulation 109, neither must a train hauled by a Fordson Tractor be set back on to another train when either train is conveying passengers.
- (10) The Murrabit Line is worked under the Train Staff and Ticket System, and the Rules contained in Appendix II., Book of Rules and Regulations and the supplementary instructions shown in the General Appendix, also any other Rule, Regulation, or Instruction contained in the Book of Rules and Regulations which apply to Steam trains will, in so far as they apply, be applicable to trains hauled by Fordson Tractor.
- (11) The Time Table between Kerang and Murrabit is based on an average rate of speed of 12 miles per hour, which will permit of a load of approximately 100 tons being hauled. If the load be increased, speed will be proportionately reduced.
- (12) The maximum rate of speed for a train hauled by Fordson Tractor between Kerang and Murrabit is 20 miles per hour, subject to a maximum speed of 15 miles per hour not being exceeded when hauling 50 per cent. or more of the Tractor's load capacity. When passing over Points a speed of 5 miles per hour must not be exceeded.
- (13) When approaching Kerang on the Up journey and Murrabit on the Down journey, the Driver must have his train well under control, so as to be able to stop at the Home Signal whether the Home Signal is at "Proceed" or not. If he finds when approaching the station that the Home Signal is at "Proceed" he may enter the station, keeping his train under proper control. Before the Home Signal is placed at "Proceed" at either Kerang or Murrabit for the Tractor train to arrive, the platform road must be clear to the fouling point at the opposite end of Yard.

Time Table Oddity #2- Onward and Upward?

This journal—and particularly the current editor—has often speculated upon the origin of the terms “Up” and “Down” in railway jargon. We have advanced the idea that it derived from the style of timetables in which there was a centre column of station names with the principal terminus at the top, in which the columns to the left of the station names were read downwards and those to the right were read upwards.

It was pleasing therefore to find the timetable below in the Spring 2002 edition of our companion publication, *The Timetable Collector*, journal of the National Association of Timetable Collectors. It is the employee time table of two early Ohio lines, the *Little Miami, Columbus & Xenia* and the *Hillsborough & Cincinnati*.

Here the columns are actually *headed* “Upward Trains” and “Downward Trains” an example, I hoped, of what logicians call a ‘confirming instance’—but, whoa!—the “Upward” column reads *downward* and the “Downward” column reads *upward*.

What can this mean?

It would appear that in most U.S. states immediately to the south of the Great Lakes, “Upward” means “Upstate” or northward or towards the water and “Downward” the reverse of that.

So, on this, I am afraid we are no further forward or upward. Perhaps we have actually gone backward.

**Little Miami, Columbus & Xenia, and Hillsborough & Cincinnati

SPECIAL REGULATIONS.

READ CAREFULLY.

A. The upward Express Train is entitled to the track ten minutes beyond Card Lane, or until 7.40 A. M., at Morrow, as against the Mail Train; but if the Mail Train should not arrive, the Express will leave at 7.50, A. M., and run as usual, twenty minutes behind regular time, until the train is passed.

For safety, when a Train fails to make a meeting point, the Train on time must allow three minutes for possible variation in watches; and must also run the first curve slowly, but no Conductor or Engineer must take advantage of, or procure upon such delay.

B. The downward Express, and upward Mail Trains, will pass on the double track. If the Express Train cannot make Plainville before 6.32 P. M. Mail Train time for leaving that Station, it becomes irregular, and must give the Road to the Mail Train.

The figures in **LARGE TYPE** indicate meeting and passing points.

On Sunday, one Train each way will be run between Cincinnati and Columbus, leaving Columbus at 6 A. M., West Jefferson 6.35, London 7, South Charleston 7.25, Cedarville 7.46, arrive at Xenia 8.5, depart 8.25; leave Corwin 8.53, Morrow 9.27, Posters 9.49, Loveland's 10, Millford 10.25, Engine House 10.55; arrive at Cincinnati at 11.15.

Leave Cincinnati at 2.30 P. M., Millford at 3.15, Loveland's 3.37, Posters at 3.50, Marrow 4.16, Corwin 4.48. Arrive at Xenia 5.24; depart 5.40, leave Cedarville 5.58, S. Charleston 6.21, London 6.46, W. Jefferson 7.10. Arrive at Columbus 7.45.

EXTRA FREIGHT TRAINS will follow, and be considered as a part of the regular Freight Train.

A separate Train is placed upon the Road to run between Xenia and Springfield, and is classed as a Passenger Train.

No Train must pass the junction of the Hillsborough Road at Loveland's, until it is certainly known that all Trains due and entitled to the Road, have passed.

Trains between Loveland's and Hillsborough will be governed by the rules in force on the L. M. and C. & X. Roads.

No Sunday Train will be run on the Hillsborough & Cincinnati Road, nor between Xenia and Springfield.

All Trains will use the double track between Plainville and the Engine House, under the following regulations:

In leaving the single, and entering upon the double track, all Trains will keep to the right, that is to say, upward Trains will take the east track, and downward Trains the west track.

No Train must leave the double track until it is certainly known that all Trains due and entitled to the Road, have passed.

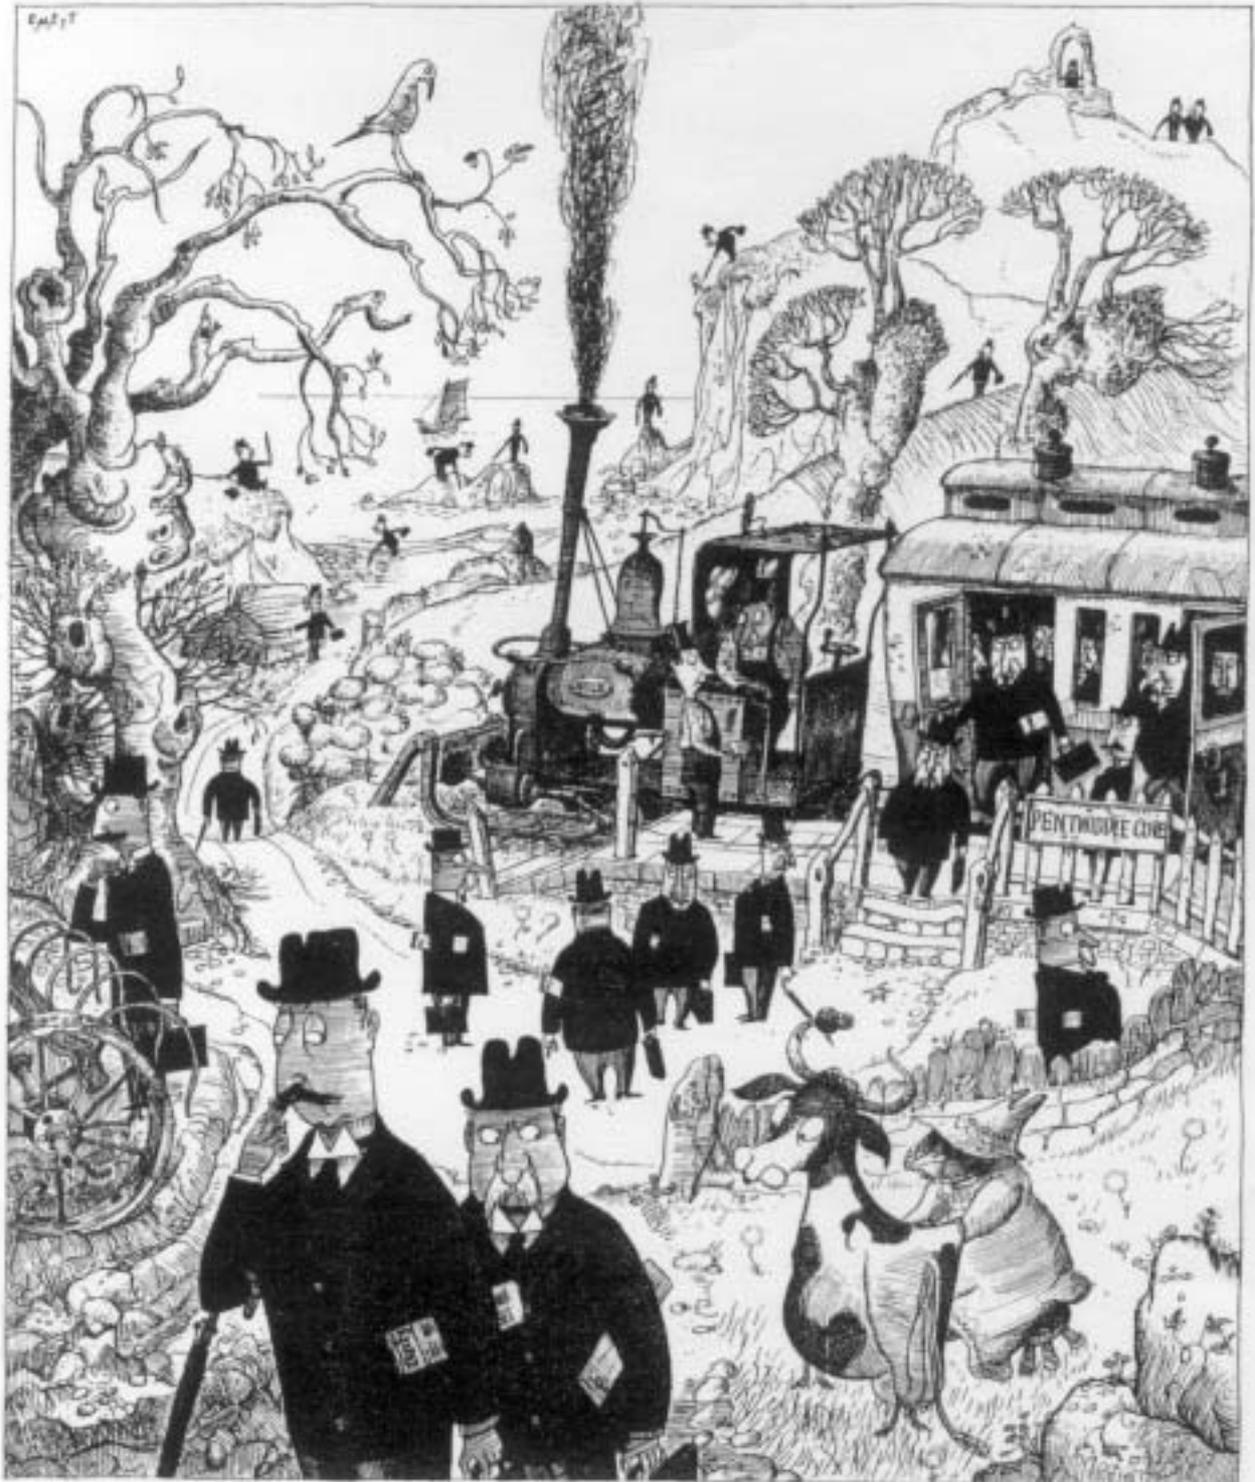

W. H. CLEMENT, Superintendent.

Hints for Traffic Men.

- Don't use buffer as support in springing to or from platform.
- Don't stand near engine injector exhaust.
- Don't step on buffer spindle.
- Don't walk between buffers.
- Don't sit on point levers; hold with hands.
- Avoid engines when front cocks open and blowing; you cannot see in the steam.
- Don't sit in doorways of brakevans; the door slides.
- Don't forget the counterweight of a signal post drops at intervals.
- Mind your hand when cleaning points.
- When alighting from brakevans be sure there is a step.
- When working on trucks in wet weather, remember that all ironwork, bolts, &c., will be slippery.
- Keep the track clear of couplings, &c.
- When window open, or you are in guard's lookout window, beware of passing trains.
- Stand clear after exchanging staffs.
- Retain your hand lamp when in the yard. Do not in any case set it down.
- Get an understanding with your engine crew to ensure prompt acceptance of signal.
- Watch the release lever on a truck fitted with auto. coupling.
- Watch the draw-hook behind you when coupling up.
- Put back the sliding panels of sheep race when work completed.
- Do not pass between buffers and draw-hook—stoop underneath.
- Watch the open car door when train stops or starts—it may close on your hand.
- Be sure no chains or ropes are hanging from empties when pulled out.
- When exchanging staff or tablet, see that you are clear; the engine exchanger may be projecting a little if the driver isn't watchful.
- When you've exchanged, step back; there may be loose sheets, ropes, or projecting loading.
- Keep your tablet a long way from your face when ready to exchange, also look out that the fireman's sling doesn't find your face. At night, try rolling a piece of white paper round the cane to help the fireman find the tablet. This is a great help to him.
- When siding or crossing loop by hand points, keep your hand on the points so that you may be projecting from wagons which may be projecting from point handles.
- Do not get under the chains when crossing from one side to the other. Get a good hold, uncouple chain and re-couple when on the other side. Don't cross over long couplings in the dark (a tunnel in day-time); wait till the train gets out.
- Don't cross the line close to train, trucks, or trams; give them the chance to move a little before hitting you.

Good advice, from a 1946 New South Wales Railways Western Division Working Time Table. Perhaps a wag at the Government Printing Office was responsible for this. At any rate, it disappeared in later editions

"I STILL reckon we should 'ave been the 8.35 to the City . . . !"

Graphic Insight

By CHRIS BROWNBILL

You could probably count on one hand the public transport services in Australia that use the same rolling stock today as they used forty years ago. Examples that come to mind are the Adelaide to Glenelg tramway (where H class trams have operated since 1929!), to some extent some Melbourne tram routes, and Victoria's South-Western main-line railway from Melbourne to Warrnambool. This month, Graphic Insight takes a closer look at the latter service where 50-year-old B class diesel locomotives and their sprightly 40 year old S class sisters haul trains of traditional heavy cars including ex Spirit of Progress compartment passenger cars under the banner of West Coast Railway.

To look through the looking glass, we use table 27 of the Victorian Railways Country Time-Table, Winter Edition July 17-November 5 1961. This shows us that on Mondays to Saturdays "The Flier" left Melbourne at 8:25am, and stopped at 19 stations before arriving at Port Fairy at 1:55pm. Some stops at smaller stations occurred on three days per week only, some being Tue, Thur and Sat only, others being Mon, Wed and Fri only, whilst another is Tue, Wed and Thur only. By contrast, the V/Line South West Victoria timetable of 27 January 2002 tells us that the modern-day counterpart of this train departs Melbourne at 8:48am, and stops at 6 stations en-route before terminating at Warrnambool at 11:58am. The final leg beyond Warrnambool to Port Fairy was amputated on 12 September 1977.

Our graphs below illustrate the journey times from Melbourne to the stations and areas around the stations on this line. The circles show the location to which it is possible to reach in specific journey time by travelling by train to a station, then taking 5 minutes to transfer to a car then driving at an average straight-line speed of 40 mph (65 km/h).

The 1961 graph illustrates the greater density of stops along the way, and the shorter average distance that it is necessary to travel by car to any given location. The 2002 graph shows that the number of stops has been dramatically reduced, however the journey time is also dramatically reduced, so that whilst the average property-owner would have further to drive to reach a railway station, it really is a superior service in the 21st century even though the same rolling stock is used. One has to wonder whether the course of public transport history would have been different had services of today's speed been offered in the 1960s when the car was eating in to rail's market share.
